The collaborative Supply Chain Management platform designed for complex multi-supplier supply chains

Take control of your upstream supply flows!

Digitize your procurement operations with a single solution that delivers real-time visibility, cost and lead-time control, regulatory compliance, and operational traceability.

End-to-end visibility.

Driving efficiency in your upstream Supply Chain

+20 to 30%
PRODUCTIVITY

Replace email exchanges and
Excel files with automated
and streamlined processes

+15 to 25%
OTIF

Be alerted at every step of the risks
on lead times to anticipate delays
and respond as early as possible

-10 to -25%
NON-COMPLIANCE

Monitor quality controls at every
stage to prevent defaults at
warehouse reception

-10 to -30%
LOGISTICS COSTS

Organize and consolidate
shipments as early as possible
to optimize transport flows

Make informed decisions at the right time !

Interconnected system for reliable and secure data

MODULAR & SCALABLE

Modular architecture
with a standard
foundation

API & WEBSERVICES

With ERP, WMS, PLM,
Freight Forwarders

QUICK DEPLOYMENT

Operational solution
in 4 to 6 months

SAAS

Secure infrastructure
based in Europe

INTEGRATED REPORTING

KPI Library,
Dashboards...

AI-POWERED

Invoice and Supplier
Dispute Management

Visibility, fluidity, modernity

Reinventing complex supply chains

How e-SCM Addresses the Challenges of Agility, Performance, and Traceability ?

Faced with increasing regulatory requirements, a complex geopolitical landscape, and evolving consumer expectations, companies are at a crossroads. They are realizing that mastering their supply chain is becoming essential to remain agile, responsible, and competitive.

e-SCM, a SaaS solution by MyTower, is designed to address these challenges. Built for companies managing complex supply chains, it helps optimize operational performance and strengthen supply chain strategy.

AGILITY, RESPONSIVENESS, AND REAL-TIME MANAGEMENT

Today's supply chains are increasingly complex. Global sourcing, multiple suppliers, shorter lead times and growing regulatory requirements require companies to collaborate more effectively and make faster decisions.

Originally developed for the demanding Fashion & Luxury industry, e-SCM now helps companies across a wide range of sectors, including cosmetics, home & living, retail, jewelry & watches, electronics and manufacturing, manage complex, international, multi-supplier supply chains.

With real-time visibility, intelligent alerts and collaborative workflows, e-SCM helps organizations improve operational performance, strengthen supplier collaboration and build more resilient supply chains.

DIGITIZATION FOR BETTER COLLABORATION

One of e-SCM's major strengths is its collaborative approach: the platform integrates all supply chain actors, internal and external, into a single digital environment. No more scattered Excel files or endless email threads, everything is centralized, structured, and seamless.

With automated workflows, intelligent alerts, and customizable dashboards, teams gain efficiency and peace of mind.

Most importantly, they have a clear, consolidated view of all operational history, along with a forward-looking schedule to assess the impact of any delays and anticipate informed decision-making.

A CONCRETE RESPONSE TO CSR AND REGULATORY REQUIREMENTS

Traceability is no longer optional. Between the European Directive on corporate due diligence, environmental labeling requirements, and consumer pressure for greater transparency, brands must make their supply chains auditable to prove traceability at every stage of their value chain.

With e-SCM, companies gain real-time visibility of their supply chain, with consolidated, verifiable, and easily shareable information. The result: they can anticipate risks, adjust operations, justify their commitments to comply with regulations, and earn their customers' trust.

A SOLUTION BUILT FOR COMPLEX SUPPLY CHAINS

e-SCM is a business platform designed for companies managing complex, international, multi-supplier supply chains. It adapts to the realities of each organization: multiple production sites, diverse product ranges, numerous suppliers, demanding quality standards and increasingly complex operational processes.

Trusted by leading brands such as Rip Curl, Intersport, ba&sh, Chantelle, Petit Bateau and Hummel, e-SCM has built its expertise in the Fashion & Luxury industry and now supports companies across a wide range of sectors facing the same supply chain challenges.

A NECESSARY TRANSFORMATION... MADE ACCESSIBLE

Digital transformation of the supply chain is no longer an ambition, it is a necessity. With e-SCM, this transformation becomes an accessible strategic lever, enabling a more responsive, transparent, and sustainable fashion industry.
